

GPS Economy of Scale.

Ashtech proves that great things come in small packages.

**Introducing the Ashtech G8 GPS
OEM board. It's big on perfor-
mance and small on everything
else—size, power, start-up time,
and most importantly, a
very low price: \$98*.**

The new Ashtech G8 features our
proven OEM precision GPS technology
together with new features designed
to optimize performance for
mobile applications.

Inexpensive, accurate and about half the size of your
business card, the G8 outperforms other low-cost
GPS boards even in challenging environments such as
city driving because of its unique navigation
algorithms and fast satellite acquisition time.

And, if you plan to eventually move from board-
level integration to a chip-level solution, the

G8 chip set is also

available through our
partnership with Philips
Semiconductor.

Try it out for your

very low price: \$98.*

The new Ashtech G8 features our proven OEM precision GPS technology together with new features designed to optimize performance for mobile applications.

It's ideally suited for system integrators and OEM providers, and is available at substantial savings over other GPS receivers for high-volume applications, such as car navigation, fleet management and consumer products.

level integration to a chip-level solution, the G8 chip set is also available through our partnership with Philips Semiconductor.

Try it out for your application You can test drive the G8 with our Evaluation and Developers Kit, which includes the G8 GPS receiver housed in an easy-to-use enclosure, antenna, interface cables, user manuals and evaluation software. For more information, call us today at 1-800-922-2401.

A Quantum Leap for RTK.
Go where no RTK receiver has gone before.

A Quantum Leap for RTK.

Go where no RTK receiver has gone before.

Ashtech GPS+GLONASS RTK provides high-accuracy real-time positioning where no other GPS system can, yet costs less than other RTK systems.

RTK is the ultimate in high-precision, real-time centimeter positioning. Until today, RTK has only been available in places with a clear view of the sky. But, now you can go where no RTK receiver has worked before with dual-system GPS+GLONASS™, giving you more satellites, and changing all the rules for RTK performance.

Our new GG-RTK™ systems are available in board and sensor formats, as well as a turnkey surveying system.

GG-RTK provides accurate measurements in demanding locations with limited visibility, when other RTK receivers cannot—environments such as cities, in mountain valleys and in deep open pit mines.

Perhaps the best part is that you can get this performance for about half the price of most GPS-only RTK receivers. For more information about our accurate and affordable RTK receivers or survey systems, call us today at 1-800-922-2401.
